

Barnyard Buffet

Farmers work with trained animal nutritionists to ensure each animal gets the right balance of food to stay healthy at each stage of their life. Farm animals are fed a mix of grains, hay, grass, and silage, along with vitamins and minerals.

Use the bean bags to feed and water the animals on the farm

WATER **VITAMINS/MINERALS** **FEED**

	Chicken 1 1 1		Turkey 1 1 1
	Sheep 2 2 2		Pig 2 2 2
	Dairy Cow 3 3 3		Beef Cattle 3 3 3

Farm Facts!

Upcyclers

Livestock are excellent upcyclers, turning leftovers from food processing into nutritious feed

Grass or Grain fed

Both grass-fed and grain-fed beef provide key nutrients, with only small nutritional differences

Changing needs

Nutritional needs of every farm animal change a lot as they grow.

Feeding Organic

Organic meat, dairy and eggs can cost more because farmers must feed only certified organic feed

More than one stomach compartment

Animals like cattle, goats, sheep, llamas, bison, buffalo, elk and deer are called ruminants and have a four-chambered stomach. This enables them to digest their food (raw plant material) in more than one step.
